# STAINLESS STEEL DOUBLE-WALLED INSULATED WATER BOTTLE REFILL FROM THE TAP

## Why Use Insulated Stainless Steel Water Bottles?

Refilling a stainless steel double-walled insulated water bottle from the tap is **less expensive** than buying disposable plastic water bottles and **keeps water cold for hours longer**, even in the heat.

It's one way to practice Environmental Stewardship. What's that? Taking responsibility for how present choices affect the future. Refilling from the tap rather than purchasing plastic bottles reduces plastic waste.

### BYOB: BRING YOUR OWN BOTTLE

Water is a healthy alternative to many other beverages, so drinking water should be encouraged. However, buying bottled water is not the most cost or environmentally conscious way. Convenience is the number one reason people give when asked why they buy bottled water. Carrying a refillable insulated bottle provides that convenience while keeping the water cold. It also prevents the possible leaching of chemicals from plastic sitting out in the heat.

**Think before you drink.** Refilling a stainless steel insulated bottle with NPWA tap water saves money and reduces plastic waste. In fact, at less than \$1.00 a day for all the water used by an entire household for all purposes, NPWA tap water is the **"Best Bargain in Town."**
